Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

Persona: Small-scale farmer / agricultural extension officer using Green-Predict-Pro to decide the best crop for a given field.

SAYS • "I don't know which crop will give the best yield this season." • "The soil test report is hard to interpret." • "I want a simple tool that tells me what to plant."	THINKS • Is the recommended crop really suitable for my land? • Will the app understand my local climate and rainfall? • Can I trust the prediction with my season's income?
DOES • Enters N, P, K, temperature, humidity, pH and rainfall values. • Compares the recommended crop with what neighbours are growing. • Consults extension officers before final sowing decision.	FEELS • Anxious about crop failure and financial loss. • Hopeful that data-driven advice will improve yield. • Confident once the recommendation matches local experience.
