Problem-Solution Fit Canvas

Use the framework below to ensure your proposed solution accurately addresses the root causes, behaviors, and limitations of your target audience.

1. CUSTOMER SEGMENT(S) [CS]

Small & medium farmers, agricultural extension officers, agri-researchers, and policymakers who need data-driven crop guidance.

2. PROBLEMS / PAINS + FREQUENCY [PR]

Wrong crop selection every season; yield loss; inefficient use of fertilizers; occurs at every sowing cycle (2–3 times a year).

3. TRIGGERS TO ACT [TR]

Approaching sowing season, unexpected rainfall patterns, government advisories, low yield in the previous season.

4. EMOTIONS BEFORE / AFTER [EM]

Before: anxious, uncertain, confused. After: confident, informed, empowered with evidence-based crop choice.

5. AVAILABLE SOLUTIONS – PROS & CONS [AS]

Extension officer visits (limited reach), generic KVK pamphlets (not personalized), commercial agri-advisory apps (paid, limited transparency).

6. CUSTOMER LIMITATIONS [CL]

Low-cost smartphones, poor connectivity in rural areas, limited digital literacy, cannot afford paid subscriptions.

7. BEHAVIOUR + INTENSITY [BE]

Farmers frequently consult neighbours, YouTube videos and local dealers before sowing; high intensity around season start.

8. CHANNELS OF BEHAVIOUR [CH]

ONLINE: WhatsApp groups, YouTube, agri-YouTubers, government portals. OFFLINE: extension officers, KVK meetings, local seed dealers.

9. PROBLEM ROOT / CAUSE [RC]

Lack of an affordable, easy-to-use, data-driven decision tool that combines soil nutrients (N, P, K) with climate (temperature, humidity, pH, rainfall).

10. YOUR SOLUTION [SL]

Green-Predict-Pro – a Flask web app that takes N, P, K, temperature, humidity, pH and rainfall as inputs and recommends the most suitable crop using a trained ML classifier, plus insights for researchers.
