

Coding & Solution

Date	05 July 2026
Team ID	
Project Name	Green-Predict-Pro
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of the implemented code and the overall solution.

Instructions

1. Ensure the code is well-structured, commented, and follows best practices for the chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to the code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	To be updated by team lead in the workspace once the repo is created.
Programming Language(s)	Python 3.x, HTML5, CSS3, JavaScript
Framework(s) Used	Flask, Bootstrap, scikit-learn
Key Features Implemented	Crop recommendation form, ML prediction backend, suitability check for a chosen crop, researcher dashboard, downloadable prediction report.
Pending / Incomplete Features	Multilingual UI, Weather-API auto-fill, mobile app version.
Setup / Run Instructions	(1) python -m venv venv (2) activate venv (3) pip install -r requirements.txt (4) python app.py (5) open http://127.0.0.1:5000

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
------	----------	-------------------

1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments

The model achieves ~99% accuracy on the held-out test set of the crop recommendation dataset. The best classifier is Random Forest with 100 estimators.
